What is Eagle 1600?

Eagle 1600 is a repeater for 2.4GHz wireless networks and when setup correctly it will expand the coverage of your wireless network.

The setup of Eagle 1600 can be done from your computer, smartphone or tablet.

- 📶 Wireless signals from Eagle 1200
- 📶 Wireless signals from Eagle 1600

How do I setup my Eagle 1600?

WiFi Network Name (SSID):

Eagle_0833CD

Setup link for WEB browser:
jensen.setup

The name is different on all Eagle 1600, so look at your device to find the correct name to look for.

<http://jensen.setup>

3. Open a new tab in your web browser and enter **http://jensen.setup** and click **enter**.

* If the above address doesn't work you can try **http://192.168.39.1**

http://jensen.setup and http://192.168.39.1 is both local addresses, and will only work when you are connected the Eagle 1600 WiFi network.

4. You should now see the setup wizard.

Select the wireless network you want to extend/repeat from the list and click **Next**.

Next

5. As default Eagle 1600 will use the same name and password as your existing wireless network (Option A), but you can also select to use a different name and password (Option B) for the extended wireless network.

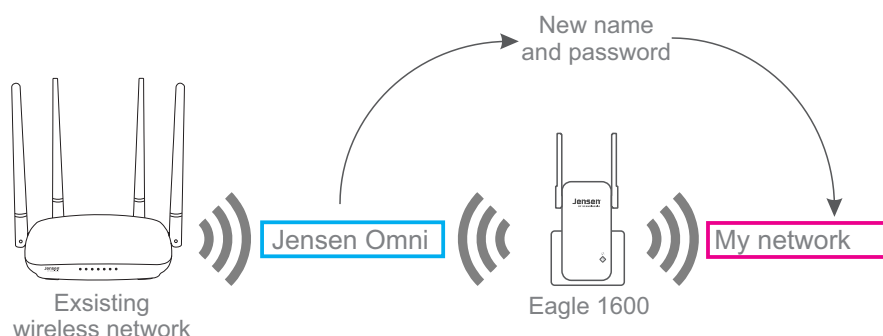

Option A

1. Enter the password for the existing wireless network and click Finish.

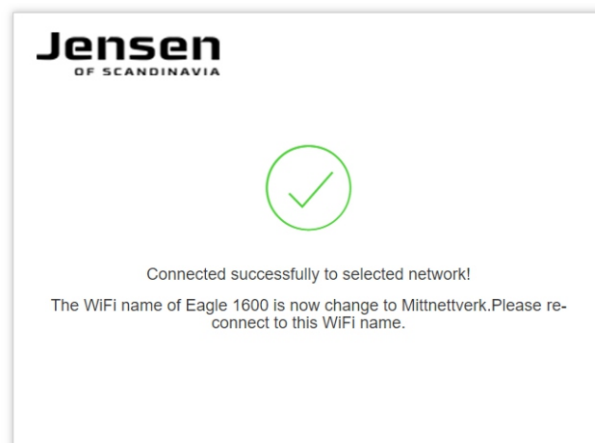

Option B

1. Enter the password for the existing wireless network.
2. Remove the option «Use same WiFi name and password...»
3. Enter the new name and password (minimum 8 characters) and click Finish.

6. Eagle 1600 will now try to connect to your existing wireless network.

7. If the connection is successful the setup is finished.
Please see next page for tip of placement.

Where should I place the Eagle 1600?

In order for the Eagle 1600 to work as best as possible the placement is important. We recommend to place the Eagle 1600 in the middle of the area you need coverage and where your wireless router are located.

Please avoid placing the Eagle 1600 in areas with bad/low signals like behind TV, behind couch etc. Please also avoid placement near TV, speakers, amplifiers etc.

The speed/performance of the Eagle 1600 wireless network are all depending on what kind of signal it can receive from your main wireless router.

See page 9 for information about LED status.

How do I reset the Eagle 1600?

1. Connect Eagle 1600 to power and wait one minute.
2. Press and hold the RESET button for 10 seconds.
3. The Eagle 1600 are now reset and ready to do a new setup.

Eagle 1600 will not connect to my network/setup does not start?

Please check the below steps if you have any problems with connecting the Eagle 1600.

1. Placement

If the Eagle 1600 will not connect to your network please try to put it closer to your wireless router, and then try setup again. (See how to reset).

2. Selected WiFi network

Please make sure you are selecting the correct wireless network during setup.
The Eagle 1600 only support 2.4GHz WiFi (not 5GHz).

3. Encryption key

Please make sure you enter the correct encryption key (WiFi password) for your existing wireless network during setup of Eagle 1600.

If you have problem with setup not starting, then please do a reset of the Eagle 1600, and then make sure your device is connected to the wireless network of the Eagle 1600.

Another option is to try to setup using a different device (Computer, phone or tablet).

Frequently asked questions

The connection from the Eagle 1600 is unstable/bad performance.

The performance from the Eagle 1600 is depending on how good signal it can receive from the wireless network. Please try to move the Eagle 1600 to another location/closer to the wireless router.

Interferences from other WiFi network using 2.4GHz can also be a reason for unstable connection and/or bad performance. A solution to this issue is to change the 2.4GHz channel on your wireless router.

How do I reset the Eagle 1600?

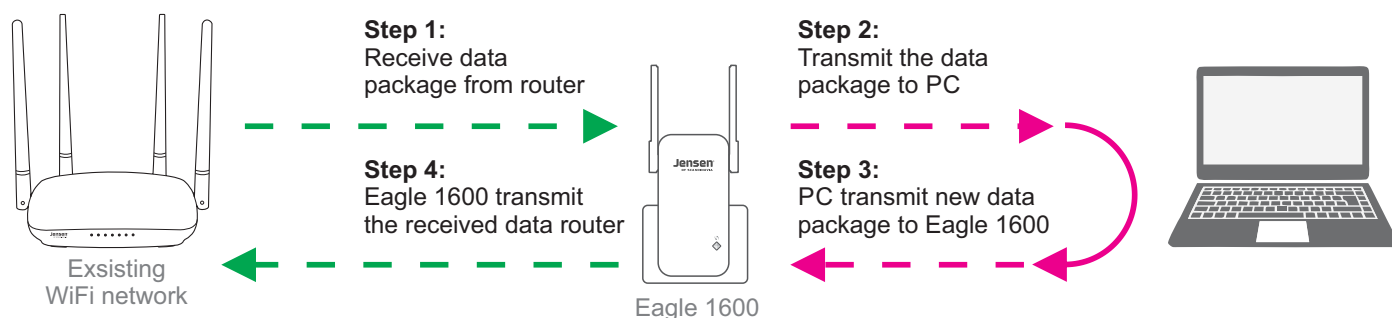

Connect to power, wait one minuter and then press and hold the RESET button for 10 seconds.

I cannot connect / login to Eagle 1600?

Please make sure your device (PC, smartphone or tablet) are connected to the wireless network from the Eagle 1600 (See page 5)

The Eagle 1600 give me bad performance

The Eagle 1600 is working in half duplex, meaning that the WiFi speed/performance from the Eagle 1600 is 50% less than from the wireless router. The reason for this is that a repeater cannot receive and send at the same time.

LED status on the Eagle 1600

LED color	Status	Description
Red	Steady	Eagle 1600 is starting / not setup correctly
	Flashing	* Eagle 1600 tries to connect, or * Eagle 1600 are not able to connect to the selected WiFi network. Try setup again.
Green	Steady	Eagle 1600 is connected with a good signal
Orange	Steady	Eagle 1600 is connected, but the signal is weak. Please try to move it closer to the wireless router.
	Flashing	Eagle 1600 is connected, but the signal is very weak. Please try to move it closer to the wireless router.
